Opening Activity:

STEPS FOR
WORD PROBLEM.

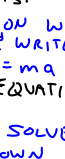

What are the steps for solving physics word problems? How can we remember them in a test?

- KNOW, UNKNOWN

- DIAGRAM

Perseverance is not a long race; it is many short races one after the other.
Walter Elliot

- 1) READ THE PROBLEM/QUESTION
 - CIRCLE THE #S THEY GIVE
 - MARK OTHER IMPORTANT INFO
- 2) DRAW A DIAGRAM
 - START & END
 - DIRECTION
 - #S YOU KNOW
- 3) LIST KNOWN & UNKNOWN
 - $m =$
 - $a =$
 - $F = ?$
 - CONVERT UNITS?
- 4) PICK AN EQUATION WITH YOUR UNKNOWN & KNOWN & WRITE IT AS SYMBOLS
 - $F = ma$
- 5) FILL INTO THE EQUATION THINGS YOU KNOW WITH UNITS
- 6) DO ALGEBRA - SOLVE FOR THE UNKNOWN
- 7) CHECK
 - REASONABLE?
 - UNITS
 - DIRECTION

What we should have solid:

Memorize our ~~5~~⁸ vocab cards, units, vector or not, definition, formula

Be able to answer distance vs displacement questions

Be able to make measurements of real-life motion. Know what is likely to make timing things difficult and how to get more reliable timing results

Be able to convert between miles and meters, between hours, minutes, and seconds

Be able to calculate speed = dist/time and velocity = disp/time

Know what all of the symbols in the UAM equations stand for and mean

Be able to turn a UAM word problem into a list of knowns and unknowns

Be able to pick the equation with those 4 things in it

Be able to put the knowns into that equation

(Be able to solve for the unknown)

PG 65 FINDING FRICTION ON CAR

Things we know: $F = m \cdot a$

$$F_{\text{grav}} = W = m \cdot a_g$$

$$\text{Puller } m = 50 \text{ g} \times \frac{1 \text{ kg}}{1000 \text{ g}} = .050 \text{ kg}$$

$$\text{Chunk } m = 1000 \text{ g} = 1 \text{ kg}$$

$$\text{Cart } m = 101.6 \text{ g}$$

$$F_{\text{grav}} = (m_{\text{car}} + m_{\text{chunk}}) \cdot (-9.8 \text{ m/s}^2)$$

Measure:

- distance on table
- time to travel from rest

$$a = ?$$
